Keeping Track of Latest Developments in AI with aipano.cse.ust.hk

The website aipano.cse.ust.hk provides a topic-based index to research papers published since 2000 at major AI and Machine Learning venues. It lets you keep track of the latest developments in AI and offers a fast way to find recent highly cited papers on various topics or published at a certain venue. Here are few screenshots of a session with the system to illustrate its functionalities.

Knowing the General Trends: At the front page, you can perform sort by "popularity: past year" to find the topics with the largest numbers of papers in the past year (2018):

layer, convolutional, convolutional-neural, cnn, pretrained, architecture, back
lstm, recurrent-neural, rnn, recurrent, shortterm-memory, embedding, softma
pixel, scene, visual, occlusion, camera, spatial, illumination
convex, optimization-problem, bind, inequality, upper-bind, optimal-solution, computational-linguistics, sentence, corpus, empirical-method-natural-langue
trajectory, temporal, dynamic, dynamics, robot, robotic, movement
language-model, word-embedding, vocabulary, word-word, word-representation

If you sort the topics by "trend: 3 years", you will find the topics with the fastest increase in popularity the past three years:

Istm, recurrent-neural, rnn, recurrent, shortterm-memory, embedding, softm:
Istm, recurrent-neural, rnn, recurrent, shortterm-memory, embedding, reachedding, recurrent, shortterm-memory, embedding, softm:
Istm, recurrent-neural, rnn, recurrent, shortterm-memory, embedding, reachedding, recurrent, shortterm-memory, embedding, word-word, word-represent;

It is interesting to find the topic "causal, causality, causal-model, causal-inference, …" at the 6th position although the total number of papers on the topic is relatively small.

Keeping Track of the Latest Developments on a Topic: By clicking on a topic, you will see its trend curve and, more importantly, papers on the topic that you might want to add to your reading list. Here is the trend curve of the topic "layer, convolutional, convolutional-neural, cnn, pretrained, ...":

Nearly 3,000 papers were published on the topic in 2018! Here are the most cited ones, which are good candidates for a reading list:

| CVPR 2018 Squeeze-and-Excitation Networks 42 | 425 |
|--|-----|
|--|-----|

| CVPR | 2018 | Interpretable Convolutional Neural Networks | 303 |
|------|------|--|-----|
| JMLR | 2018 | Quantized Neural Networks: Training Neural Networks with Low | 266 |
| | | Precision Weights and Activations | |
| CVPR | 2018 | Learning Transferable Architectures for Scalable Image Recognition | 252 |
| ICML | 2018 | Obfuscated Gradients Give a False Sense of Security: Circumventing | 176 |
| | | Defenses to Adversarial Examples | |

It is possible to narrow down the candidates by requiring key words. Here are the most cited papers in 2018 that contain the key word "adversarial" in title.

| ICML | 2018 | Obfuscated Gradients Give a False Sense of Security: Circumventing Defenses | 176 |
|------|------|---|-----|
| | | to Adversarial Examples | |
| ICML | 2018 | CyCADA: Cycle-Consistent Adversarial Domain Adaptation | 111 |
| ICLR | 2018 | Towards Deep Learning Models Resistant to Adversarial Attacks | 77 |
| ICML | 2018 | Provable Defenses against Adversarial Examples via the Convex Outer | 68 |
| | | Adversarial Polytope | |
| CVPR | 2018 | AttnGAN: Fine-Grained Text to Image Generation With Attentional Generative | 45 |
| | | Adversarial Networks | |

If you are interested in reinforcement learning, you might want to take a look at the topic "agent, mdp, reward, action, reinforcement-learning, ...":

Here are the most cited papers on the topic published in 2018:

| ACL | <u>2018</u> | Deep Reinforcement Learning for NLP | <u>295</u> |
|------|-------------|---|------------|
| AAAI | <u>2018</u> | Deep Reinforcement Learning That Matters | <u>133</u> |
| AAAI | <u>2018</u> | Rainbow: Combining Improvements in Deep Reinforcement Learning | <u>104</u> |
| AAAI | <u>2018</u> | Counterfactual Multi-Agent Policy Gradients | <u>79</u> |
| AAAI | <u>2018</u> | Emergence of Grounded Compositional Language in Multi-Agent Populations | <u>76</u> |

An Investigation into Work on Causality: Here is the trend curve of the topic "causal, causality, causal-model, causal-inference, ...":

Here are the most cited papers on the topic in 2018, 2017 and since 2000:

| Series | Year | Title | Cited |
|--------|------|--|-------|
| ΑΑΑΙ | 2018 | Measuring Conditional Independence by Independent Residuals: Theoretical | 201 |
| | | Results and Application in Causal Discovery | |

| AAAI | 2018 | Fair Inference on Outcomes | 31 |
|------|------|--|----|
| JMLR | 2018 | Learning Certifiably Optimal Rule Lists for Categorical Data | 29 |
| ICML | 2018 | Neural Relational Inference for Interacting Systems | 20 |
| JMLR | 2018 | Uncovering Causality from Multivariate Hawkes Integrated Cumulants | 15 |

| ICLR | 2017 | A Compositional Object-Based Approach to Learning Physical Dynamics | 40 |
|-------|------|---|----|
| EMNLP | 2017 | A causal framework for explaining the predictions of black-box sequence-to- | 29 |
| | | sequence models | |
| ICLR | 2017 | Revisiting Classifier Two-Sample Tests | 25 |
| NIPS | 2017 | Avoiding Discrimination through Causal Reasoning | 24 |
| NIPS | 2017 | Counterfactual Fairness | 22 |

| UAI | 2001 | Direct and Indirect Effects | 889 |
|------|------|---|-----|
| UAI | 2001 | Causes and Explanations: A Structural-Model Approach Part 1: Causes | 648 |
| JMLR | 2006 | A Linear Non-Gaussian Acyclic Model for Causal Discovery | 585 |
| UAI | 2007 | Causal Bounds and Instruments | 567 |
| JMLR | 2007 | Estimating High-Dimensional Directed Acyclic Graphs with the PC-Algorithm | 500 |

Appearng Smart in Front of Students: A student is interested in zero-shot learning. I searched for "zero-shot" within several relevant topics and found the following papers:

From topic "transfer-learning, multitask-learning, multitask, ...":

| ICML | 2015 | An embarrassingly simple approach to zero-shot learning | 287 |
|-------|------|---|-----|
| CVPR | 2016 | Synthesized Classifiers for Zero-Shot Learning | 90 |
| AAAI | 2016 | Transductive Zero-Shot Recognition via Shared Model Space Learning | 42 |
| IJCAI | 2016 | Using Task Features for Zero-Shot Knowledge Transfer in Lifelong Learning | 32 |
| CVPR | 2017 | Learning a Deep Embedding Model for Zero-Shot Learning | 28 |

From topic "lstm, recurrent-neural, rnn, recurrent, ...":

| CVPR | 2016 | Multi-cue Zero-Shot Learning with Strong Supervision | 39 |
|-------|------|---|----|
| CVPR | 2017 | Learning a Deep Embedding Model for Zero-Shot Learning | 28 |
| ICML | 2017 | Zero-Shot Task Generalization with Multi-Task Deep Reinforcement Learning | 16 |
| EMNLP | 2017 | Zero-Shot Activity Recognition with Verb Attribute Induction | 10 |
| CVPR | 2018 | Multi-Label Zero-Shot Learning With Structured Knowledge Graphs | 6 |

From topic "layer, convolutional, convolutional-neural, cnn, ...":

| NIPS | 2013 | Zero-Shot Learning Through Cross-Modal Transfer | 532 |
|-------|------|--|-----|
| ICLR | 2014 | Zero-Shot Learning by Convex Combination of Semantic Embeddings | 222 |
| ACL | 2015 | Hubness and Pollution: Delving into Cross-Space Mapping for Zero-Shot Learning | 67 |
| IJCAI | 2015 | Semantic Concept Discovery for Large-Scale Zero-Shot Event Detection | 56 |
| CVPR | 2016 | Multi-cue Zero-Shot Learning with Strong Supervision | 39 |

Other Uses: Do your ever wonder how AIJ and JMLR differ in terms of topics? Here is what I

found on aipano for the past 5 years.
